Steel Rollers Made for High Cycles

The Tommy Gate Railgate Series consists of expertly-engineered lifts that allow for higher weight capacities and deeper platforms. The level-ride function and options such as cart stops and retention ramps make them ideal for heavy, sensitive, wheel-based cargo. Including more standard features than other railgates and focused on safety in design, this series of lifts offers value to both owners and operators alike.

Applications in any environment

High-cycle models apply a steel roller and leaf-chain pulley system to maximize smoothness of motion, endurance, and strength. This medium-duty railgate is ideal for high-cycle applications in any environment. These lifts are built with the highest quality components and place a priority on function and safety.

Maintenance-Free Components

Steel rollers guide the platform vertically within the rail track and are designed to withstand intensive cycling. Dual sealed, maintenance-free ball bearings ensure the rollers are long-lasting and perform consistently in all climate conditions.
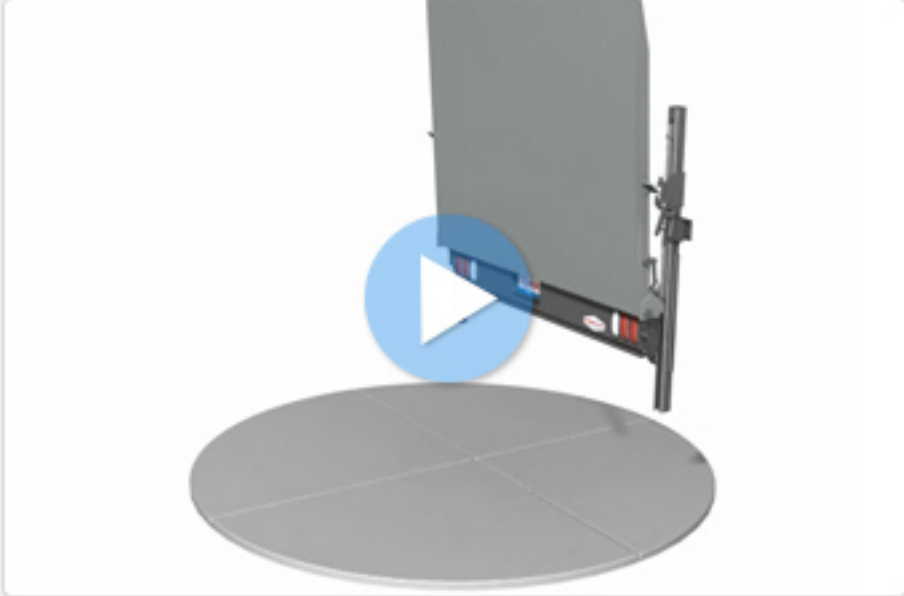

Standard Features

High-cycle railgates come standard with safety trip bar, auto open and close, and recessed lights. Taper-integrated cart stops are optional on extruded-aluminum platform models.
